

#### Terver and Khoi

- Addressed some confusion of about having two battery sources on the home node
- The 3G module has a power requirement of it's own, and the data sheet is fairly restrictive
- Two Issues:
  - Is our 3g module suitable
  - If we choose this 3g module how do we power with it
  - Is it worth the time to figure this out (learning curve is the main issue)
- Conclusion
  - Figure out the power requirements and the learning curve.
  - Do spend more time working with the current module
    - Figure out the power issue first
    - Then the configuration

#### Tim and Stephen

- Long range radio transmitters for the real deal, smaller ones for testings
- Both home and individual nodes have an arduino
- Network of nodes:
  - Find the best wireless protocol i.e. CDMA
  - Find a new or existing protocol for sending data between

#### Ian Harris

- Demoed the current web app
- Showed the domain
